Core components covered include:

- Element identification based on position
- Group and period characteristics
- Electron configuration patterns
- Trends such as atomic radius, ionization energy, electronegativity, and metallic character

Element Classification and Positioning

Groups and Families

Groups are vertical columns in the periodic table, often containing elements with similar chemical properties due to their similar valence electron configurations.

Key groups include:

- Group 1: Alkali Metals (e.g., Lithium, Sodium, Potassium)
- Group 2: Alkaline Earth Metals (e.g., Magnesium, Calcium)
- Group 17: Halogens (e.g., Fluorine, Chlorine)
