Understanding the Infiniti G35 Reversing Camera Wiring System

Before diving into the wiring diagram, it's essential to understand the key components involved in the reversing camera system:

- Reversing Camera: The camera mounted at the rear of the vehicle, capturing the live video feed.
- Power Supply: Provides electrical power to the camera.
- Ground Connection: Completes the circuit by connecting to the vehicle's chassis.
- Video Signal Wire: Transmits the video feed from the camera to the display monitor.
- Trigger Wire (Reverse Signal): Activates the camera when the vehicle is shifted into reverse.
- Display Monitor: Located inside the vehicle, displaying the rear view.

A typical wiring setup for an Infiniti G35 reversing camera integrates with the vehicle's reverse light circuit and the factory or aftermarket head unit.

Components Needed for Wiring the Infiniti G35 Reversing Camera

To successfully wire your reversing camera, gather the following components:

- Reversing camera compatible with Infiniti G35
- Power and ground wires (usually included with the camera)

- RCA video cable or compatible AV cable
- Inline fuse holder and fuse (recommended for safety)
- T-taps or wire connectors
- Electrical tape or heat shrink tubing
- Basic wiring tools: wire strippers, crimping tool, screwdriver, multimeter

Step-by-Step Wiring Diagram and Installation Guide

The wiring process involves connecting the camera to the power source, ground, and the display monitor. Here's a detailed step-by-step approach:

1. Mounting the Camera

- Choose a suitable location at the rear of your vehicle, typically above the license plate.
- Secure the camera firmly, ensuring it has a clear view behind the vehicle.
- Run the camera's video and power cables through the trunk or rear hatch to the front dashboard area.

2. Connecting Power and Ground

- Power (VCC) Connection:
 - Identify the reverse light wiring in your Infiniti G35. This can be found by accessing the tail light assembly.
 - Use a T-tap connector to tap into the reverse light's positive wire (+12V when reverse is engaged).
 - Connect the camera's power wire to this tapped wire.
 - Alternatively, run a wire to the vehicle's fuse box, connecting to the reverse light fuse, but this method is less straightforward.
- Ground (GND) Connection:
 - Connect the camera's ground wire to a clean, unpainted metal part of the vehicle chassis.
 - Ensure a solid connection for reliable operation.

3. Connecting the Video Signal

- Run the RCA video cable from the camera to the front of the vehicle, where the head unit or aftermarket monitor is located.
- Connect the RCA plug from the camera to the video input port on your display.

4. Wiring the Trigger Signal (Optional, if applicable)

- Some cameras or head units require a trigger wire to activate the display when reverse is engaged.
- Connect the camera's trigger wire, if present, to the reverse light circuit or a dedicated reverse trigger output from your head unit.
- This ensures the camera feed activates automatically when shifting into reverse.

5. Connecting to the Display Monitor

- If your monitor supports composite video input, connect the RCA cable from the camera to the monitor's video input.
- Power the monitor as per its installation instructions, often tapping into the vehicle's 12V power supply.
