Facilitate communication between the computer and external environment?key for user interaction and peripherals.

Buses

Data, address, and control buses connect components, enabling data transfer within the system.

Instruction Set Architecture (ISA)

One of the core elements in computer architecture is the Instruction Set Architecture (ISA), which defines the set of instructions the processor can execute.

Types of Instructions

Decide on work specialization, departmentalization, chain of command, etc., based on the above analyses.

Step 5: Choose an Appropriate Structure

Select the structure that best aligns with strategy and environment—be it functional, divisional, or matrix.

Step 6: Implement and Communicate

Ensure clear communication of roles, responsibilities, and reporting relationships.

Step 7: Evaluate and Adapt
