- Effects of Failure: The consequences or impact of the failure on the system, customer, or

process.

- Causes of Failure: Underlying reasons leading to the failure.
- Current Controls: Existing measures that detect or prevent the failure.
- Risk Priority Number (RPN): A calculated score derived from severity, occurrence, and detection, used to prioritize issues.

Why Use FMEA?

Implementing FMEA allows organizations to:

- Prevent defects and failures before they reach the customer
- Reduce costs associated with rework, scrap, and warranty claims
- Enhance product reliability and safety
- Improve process efficiency and robustness
- Foster a culture of continuous improvement
