Sample Questions and Model Answers from the 2014 Paper

Question 1: Multiple Choice

Which of the following structures is found in plant cells but not in animal cells?

- A) Mitochondria
- B) Chloroplasts
- C) Nucleus
- D) Ribosomes

Answer: B) Chloroplasts

Explanation: Chloroplasts are responsible for photosynthesis and are unique to plant cells.

Question 2: Short Answer

Describe the role of enzymes in biological reactions.

Model Answer:

Enzymes are biological catalysts that speed up chemical reactions by lowering the activation energy required. They work by providing an active site where substrates bind, facilitating the conversion into products more efficiently. Enzymes are specific to substrates and can be affected by factors like temperature and pH.

Question 3: Data Interpretation

Given a graph showing the rate of enzyme activity at different pH levels, identify the optimal pH and explain its significance.

Model Answer:

The graph indicates that the enzyme activity peaks at pH 7, which is the optimal pH. This is significant because at this pH, the enzyme's structure is most stable, allowing for maximum substrate binding and reaction rate. Deviations from this pH can denature the enzyme or reduce its efficiency.
